

Marc Marina Miravittles

Software Engineer — API-driven, commercial-outcome focused

Barcelona, Spain (Remote) · marc.marina.miravittles@gmail.com · +34 648 439 648

SUMMARY

Backend-leaning engineer with ~5 years shipping production integrations — Iterable, Snowplow, external payment providers — and leading initiatives with direct commercial impact, including an experimentation program that lifted conversion ~40% and hit an all-time monthly record for free trial starts. I partner closely with product and data teams to turn ambiguous, cross-team problems into measurable business outcomes.

EXPERIENCE

Software Engineer — Findmypast

2021 – Present · Remote (Spain) from 2023; previously London, UK

Joined as a Junior Engineer and grew into a mid-level engineer leading platform and integration initiatives — first on E-Commerce, then on the Customer Engagement Platform (CEP).

- **Led an internal A/B testing framework**, adopted company-wide, to turn a hardcoded 14-day free trial into a dynamic, journey-based length — working with data science on user segmentation. Result: ~40% conversion boost and an all-time monthly record for free trial starts.
- **Architected multi-brand support**, consolidating brand-specific services onto shared infrastructure and business logic — cutting service count significantly and letting new brands launch on the existing platform instead of a bespoke build, with zero data loss migrating legacy accounts.
- **Drive engagement and retention through CRM** (Iterable, in-app + email) and a Snowplow Signals pipeline (early pilot deployment) building per-user behaviour profiles — powering targeted nudges based on real usage. My main focus for the last two years.
- **Drove engineering initiatives protecting platform velocity and reliability** — unified CEP's 10+ services into a single monorepo to streamline delivery, and root-caused a deployment bug that risked silently dropping customer communications.
- **Took AI-driven tools from proof-of-concept to production** in the Innovation Guild — an AI summary generator over newspaper search results with OCR-linked source text, and a similar summarizer for scanned historical transcripts; both shipped to real users.
- *(Earlier tenure)* Launched a subscriptions/micropayments platform and oversaw the legacy migration, integrating an external payment provider (Kafka, Redis).

Stack: TypeScript, Node.js, GraphQL/Apollo, REST integrations (Iterable, Snowplow, payment providers), Kafka, Redis, Kubernetes, Turborepo

Earlier experience

Full-stack web development at **GJQ Holdings** (Laravel, MySQL, Git; 2018–2019) and a cross-platform productivity app built on **Node/Express + MongoDB** with an Android client (2020).

SKILLS

Backend & APIs: Node.js, GraphQL (Apollo), REST, Kafka, Redis, PostgreSQL, MongoDB **Languages:** TypeScript, JavaScript, SQL **Infrastructure & Observability:** Kubernetes, Docker, Helm, Prometheus, Grafana

Tooling: Turborepo, Yarn, Knip, Git, CI/CD

EDUCATION

BSc Software Engineering (final year top-up) — London Metropolitan University (2019–2020) · First-Class
Multiplatform App Development — Centre d'Estudis Politècnics, Barcelona (2017–2019)
